1.	New Czech Plant	
	a. The Czech production target is 200,000 million (200 milliard) units of penicillin G. This is based on the assumption that I milligram of penicillin represents approximately 1,000 units, so that this quantity would represent 200 kg. of penicillin G.	
	 b. One production lot equals 2 milliard units and a production of 100 lots per annum is expected. The usual comparison is that 1 milligram of penicillin G in the pure stage equals 1,680 units; thus it appears that the Czech penicillin G is not quite pure.
